Sprint 4 Week 3 Stand Up

👥 Assign	Ⓝ Nate Brown
📅 Date	@April 22, 2024

What was my biggest victory this week?

- Merging was actually wayyyy easier now that we were using branches etc. and getting the latest release out was a fairly simple process

What was way harder than I thought it was going to be?

- Using live data had it's quirks, with the spreadsheet columns being named differently from the example and errors in my CSV parsing initially

Was there anything else I worked on?

- Started working on simplifying some of the code that I touched

- Reduced the amount of excess data we are storing in the database

What am I working on today?

- Testing real data on the model now that we have data every second

- Ensure I'm saving the Accelerometer file as well as the others

- Set-up the background processing

What do I want to complete this week?

- Shorter week for me but if I can complete those today then I can move onto setting up the AWS Production instance on Wednesday

- In the meantime we can do an in person pilot and that will give me more bugs and UI work to touch up.

- I should probably setup a simple google form to submit errors / bugs.

- If we want Nick included then I need to do Android SDK but I don't think that's worth the time right now.

Is there anything preventing me from achieving my goal this week?

- Nope!
